

Clinical Audit Report

1. Summary

HCC is PRESENT with 4 conditions

2. Risk Assessment

Acquired hemolytic anemia, unspecified (109) → HIGH (1.48)

Acute hematogenous osteomyelitis (92) → HIGH (0.81)

Other specified diabetes mellitus with diabetic chronic kidney disease (37) → MEDIUM (0.5)

3. Explanation

Acquired hemolytic anemia, unspecified (109)

This HCC is classified as VALID because it has strong evidence to support its validity, with a consistent and persistent condition documented in the patient's record three times in 2021.

Acute hematogenous osteomyelitis (92)

The HCC code 92 is associated with Acute hematogenous osteomyelitis, a serious condition that requires medical attention, with strong evidence based on a diagnosis frequency of 4 and a risk score of 0.8109999999999999.

Other specified diabetes mellitus with diabetic chronic kidney disease (37)

This HCC code (37) is associated with strong evidence, indicating a high risk score of 0.498 and a diagnosis frequency of 4, suggesting a complex comorbidity that requires careful management.

4. Recommendation

Regular monitoring and follow-up are recommended to ensure accurate coding and documentation of HCC conditions.

5. Citations

Acquired hemolytic anemia, unspecified (109) → Year 2021 | Acquired hemolytic anemia, unspecified | Frequency: 3 | Risk: 1.476

Acute hematogenous osteomyelitis (92) → Year 2025 | Acute hematogenous osteomyelitis, left humerus | Frequency: 4 | Risk: 0.8109999999999999

Other specified diabetes mellitus with diabetic chronic kidney disease (37) → Year 2024 | Other specified diabetes mellitus with diabetic chronic kidney disease | Frequency: 4 | Risk: 0.498
