

Clinical Audit Report

1. Summary

Based on the analysis, HCC is PRESENT with a HIGH risk level. The patient's overall condition is of high concern, indicating a need for immediate attention. Further evaluation is required to determine the extent of the disease.

2. Risk Assessment

Overall Patient Risk → HIGH (26.1456680937594)

3. Explanation

Overall Patient Risk

The patient's risk level is HIGH due to a combination of factors in their patient history and repeated visits, indicating a pattern of disease progression over time. This suggests that the patient's condition is not improving and may be worsening. Further evaluation is required to determine the extent of the disease.

4. Recommendation

We recommend that the patient undergoes regular monitoring to track the progression of the disease. Follow-up appointments should be scheduled at regular intervals to assess the patient's condition and adjust treatment plans accordingly. Additionally, a risk reassessment should be conducted to determine the effectiveness of the current treatment plan and make any necessary adjustments.

5. Citations

Overall Patient Risk → The patient's risk level is HIGH due to a combination of factors in their patient history and repeated visits, indicating a pattern of disease progression over time. This suggests that the patient's condition is not improving and may be worsening. Further evaluation is required to determine the extent of the disease.
